## Installation Manual Home Controller

For questions or clarifications write to us at  
[support@inoho.com](mailto:support@inoho.com)

16<sup>th</sup> March 2015

## Install Home Controller

1. Power on the home controller
  - Red light should now turn on
  - Green light should start blinking in ~1 min

3. Connect the home controller to your WiFi router with the LAN cord.
  - Green should light up and blink intermittently

## Access Home Controller via Mobile Devices

1. Download Inoho app , and open it

To be launched in Jul 2015, if not earlier  
*(android beta available)*

If you're unable to access the home controller through the app, refer to page 04 to access via a desktop

## Access Home Controller via Desktops

Ensure that your PC/laptop is connected to the home WiFi network.

1. Identify the Default Gateway of your router (aaa.bbb.ccc.ddd)
  - **Windows:** Open command prompt (type 'cmd' in run), then type in 'ipconfig'
  - **Mac:** Open terminal ( Applications/ Utilities/Terminal), then type 'netsat -nr'
2. Open any browser (Chrome/Firefox etc.) and go to aaa.bbb.ccc.123 ; e.g.

<b>Default gateway</b>	<b>inoho address</b>
aaa.bbb.ccc.ddd	aaa.bbb.ccc.123
192.168.1.1	192.168.1.123
10.0.0.254	10.0.0.123

If you're unable to access the app, refer pg05

Note: You can also use the IP / address to access inoho on your smartphone browser

## If you cannot access inoho app

You'll need to disable one of both of the following in your **router settings**.

*By default, most routers have these disabled*

1. **Disable** 'secondary IP address for LAN' so that devices on wifi (phone/laptop) can identify the devices on LAN (home controller)
    - Look for 'secondary LAN IP address' / 'second IP address and subnet mask for LAN' / something similar
  2. **Disable** access point isolation so that devices on wifi can talk to devices on LAN
    - Look for 'multiAP isolation' / 'AP isolation' / 'access point isolation' / 'wireless isolation'
- More info here  
<http://www.howtogeek.com/179089/>

After you've sorted the above two issues, try accessing the home controller again.

## Configure Cloud Settings

1. Click menu  and select 'Cloud Settings'
2. Enter details and select 'Confirm'.

### Notes

1. It's not necessary to configure cloud settings
2. If you've already configured these, entering new details will overwrite the previous settings.
